

Skills

Proficient: JavaScript, React, Redux, HTML/CSS, Ruby, Rails, SQL, postgresSQL, Adobe Creative Suite

Working Knowledge: Java, Python, Webpack, npm, CSS modules, Processing, accessibility

Technical Projects

In Harmony: An accessibility forward color palette generator

A color palette tool that guides users in making accessible palettes. Uses the median cut algorithm to quantize colors of user-uploaded images. Accessibility is measured the WCAG guidelines for readability in addition to a custom method to detect blindness vulnerabilities. Built with React, Redux, Chroma.js, Lodash, Iro.js, Get-Pixels, Rails, B-Crypt & JWT.

The Fractal Zone: An interactive fractal machine

Pair project that draws fractal tree patterns to a canvas based on user parameters. Implemented core functionalities surrounding the fractal machine, which utilizes L-Systems to calculate & draw the patterns in conjunction with JavaScript's implementation of Processing. Built with React, p5.js, Rails, B-Crypt & JWT.

The Multi-Viz: An audio visualizer that can handle multiple file inputs concurrently

Audio visualizer that uses frequency information derived from audio file input and displays it onto a canvas. Uses a custom method to aggregate the frequency data from multiple inputs. Originally built as a feature of a vanilla JS project, which is detailed at bit.ly/2yp2mTW. Built with React. Also using the native HTML5 canvas & Web Audio API.
